

NIKKO CHEMICALS wins bronze Make-Up Bar award
at in-cosmetics Global 2024!

Paris, April 16th, 2024 - Nikko Chemicals Co., Ltd. is proud to announce that we won the bronze Make-Up Bar award in the Best Make-Up Formulation category for our makeup items at the in-cosmetics Global exhibition held in Paris.

What we entered:

Cold-process Beauty for Sustainable Production

The cosmetic industry needs decarbonizing manufacturing process. To realize a carbon-neutral future, the beauty industry aims to reduce CO2 emissions by switching to renewable clean energy sources, using energy-saving equipment, and streamlining the supply chain.

The 冷製美 (REI-SEI-BI) designs cold-processable formulas which save energy by manufacturing cosmetics without melting ingredients or heating emulsification. This collection, inspired by sustainable cosmetics craft, does not compromise on the fresh and pleasant texture of J-beauty and targets high natural origin content >97% (ISO 16128). REI-SEI-BI collection is composed of skincare & makeup items, with our makeup items winning the award this time, as mentioned above.

The watery & highly pigmented jelly eyeshadow is formulated at room temperature with lecithin-based premix emulsifier, NIKKOL Nikkomulse® LH, which can emulsify charged mineral beauty ingredients and vitamin C derivatives which should stabilize at acidic pH. This no-heat emulsifying way is our new proposal for sustainable manufacturing.

We are delighted to introduce this collection developed by our makeup formulation team during a globally challenging time. Due to their long and tireless efforts, we were able to achieve success at the in-cosmetics Global exhibition.
